SUMMARY

Frontend developer and UX/UI designer with full-stack experience (React, TypeScript, Node.js). Co-founded Guia, a digital solutions studio, and designed and built the frontend of its first client product, a ticketing platform now in production. Background in systems integration, REST/SOAP APIs and SQL as a technical analyst on Agile teams.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, PHP, Python, SQL

Frontend: React, TanStack Query, React Router, Tailwind CSS, Vite, Zod, Redux, Angular, HTML5, CSS3

Backend & Databases: Node.js, Express.js, MySQL

UX/UI Design: Figma, design systems, responsive design, accessibility (axe)

APIs & Testing: REST, SOAP, OpenAPI, Vitest, Testing Library, Playwright, MSW, Postman, Newman

Tools & Methods: Git/GitHub, GitHub Actions, Cloudflare Pages, AI-assisted development, Agile/Scrum

EXPERIENCE

Co-founder, Frontend Developer & UX/UI Designer | Guia (Desarrollos Guia) — Sep 2026 - Present | Remote

Digital solutions studio | desarrollosguia.com | audenpass.com

- Designed the design system and desktop and mobile screens in Figma and built the entire frontend of Audenpass. The ticketing platform went live in 23 days, two days ahead of the committed date.
- Built guest checkout for named tickets with Mercado Pago (Checkout Bricks), producer and admin dashboards, and QR check-in from a phone camera, using React 19, TypeScript, TanStack Query and Tailwind CSS v4.
- Used OpenAPI 3.1 as the single contract with the backend (contract-first) and built a mock backend (MSW) that matched it, so the frontend was developed in parallel and connected to the real API with minimal changes.
- Ensured quality with about 180 unit and integration test files (Vitest, Testing Library), 19 Playwright E2E suites and automated accessibility checks (axe), with CI/CD on GitHub Actions and deployment on Cloudflare Pages.
- Managed the client relationship and five milestone deliveries, each validated through UAT. Worked spec-driven: wrote the requirements, technical design and quality gates, and used AI coding tools to speed up implementation under my review and tests.

Technical Analyst | Diagnóstico Maipú (SMG) — Dec 2024 - Present

Laboratory Information Systems (LIS)

- Analyze functional and technical requirements for critical modules and turn them into documented specs.
- Support system integrations via REST/SOAP APIs, working directly with JSON/XML payloads.
- Automate API test collections with Postman and Newman to validate data on specific integration projects.
- Debug system errors by analyzing logs and service traffic, working with dev teams to find root causes.
- Write technical documentation, user stories, and acceptance criteria used directly by engineering teams.

Frontend Developer (Freelance) | Enivel7 — Aug 2023 - Sep 2023

- Built the responsive front-end for a car dealership site (maximopinasco.com.ar) with HTML5, CSS3 and JavaScript.

PROJECTS

World Cup 2026 Predictor | React, TypeScript — GitHub | Live

- Designed and built a 2026 World Cup match-prediction app end to end with React and TypeScript.

EDUCATION

- Technical Degree in Systems Programming, UCES (2024)
- Full-Stack Development (PHP), Codo a Codo 4.0 (2024)
- Full-Stack Development (Python), Codo a Codo 4.0 (2023)
- API Testing, Educación IT (2025)
- UX/UI Design, Codo a Codo 4.0 (2022)
- React.js, Coderhouse (2022)

LANGUAGES

Spanish (Native), English (Advanced, B2+)
